

# HomeMatic@TV: House control via TV

## HomeMatic@TV: House control via TV – Transform your TV into a control center.

Anyone who knows HomeMatic, knows this: the innovative house automation system from eQ-3 dramatically increases the living comfort. Windows, doors, lamps, heating units, security systems and more can all be controlled by one single control unit.

HomeMatic@TV simplifies the matter even more. Everything that was previously possible only with a computer can be done very simply and conveniently from your TV. With just one click, your TV becomes the technical and comfort control center of your home. This means:

- maximum living comfort
- increased security
- best overview
- lower time effort

## Using HomeMatic@TV you can easily “zap” through your house.

All information is converging into your TV. Through the TV you are kept updated about all areas of the house. You receive feedback about all measurements and actions that you have executed.

### 1. Room view

You can individually manage, control and optimize the conditions in your rooms by using your remote control:

- close/open the windows
- specify room temperature
- regulate building and room illumination

### 2. Alert view

You are kept informed about critical states in your household:

- is there a flooding in the washing room?
- is the air humidity in the greenhouse too high?
- is the front door still open after 10PM?

### 3. Program view

You can, for example, start with a click your own „Good-Night-Program“: close the front door, turn the heating down, switch of the lights after 10 minutes. Other periodic processes can be also individually configured.

## This is what you need for your own HomeMatic@TV.

- an existing eQ-3-Infrastructure (including the control unit without changes)
- an internet-capable TV (for example: Samsung-TV with Internet@TV) for viewing and control
- a license for the TVApp HomeMatic@TV

And now, let's start! The HomeMatic@TV application can be easily installed only by using the remote control on your TV.
